

E22-141 EMC NetWorker 7.2 Specialist Exam Description

Exam Number

E22-141

Duration

105 Minutes

Available Languages

English

The NetWorker 7.2 Specialist exam targets those who work with NetWorker 7.2 and are responsible for planning and installation, automation, and troubleshooting. This test will certify that the successful candidate is familiar with the tasks, actions, and required resources related to the exam objectives.

Exam Topics

Topics likely to be present on this exam include:

- Backup and recover network-attached file servers
- Configure snapshot backups
- Configure advanced devices
- Configure NetWorker in a clustered environment
- Understand advanced recover scenarios
- Execute a NetWorker deployment plan
- Optimize NetWorker performance
- Implement a security plan in a NetWorker data zone
- Write and troubleshoot simple NetWorker scripts
- Troubleshoot common NetWorker problems
- Describe the purpose of Legato License Manager
- Implement NetWorker modules

NOTE: This is a cross-platform exam that tests select areas about NetWorker administration on UNIX® and Microsoft Windows®. To ensure fairness to candidates who might only administer one platform, this exam was designed so that the number of platform-specific questions equate to a small percentage of the overall exam. As a result, missing the “other platform” questions alone will not cause a candidate to fail the overall exam.

Recommended Training

Recommended preparation for this exam is the EMC NetWorker curriculum.
